# PowerBI and PowerApps

1. Create Report - Report needs to have a selected value measure for field that will be "filtering"
2. Create Sharepoint List - List needs to have a column to hold the Selected Value Measure
3. Create App from Sharepoint List using integration
4. Save and Publish Power App
5. Save and Publish Report
6. In Workspace - edit report, add power app visual
7. Add selected value measure, takes you into PowerApps to connect
8. You'll se PowerBIIntegration
9. Insert Text label to see it working - use code
   - First(PowerBIIntegration.Data).'Selected Customer ID' (with Selected Customer ID being the selected value measure)
10. Then select Gallery and change the function code

11.

    11. Save and Publish.
12. Close the App
13. Go into Power BI and refresh or save, then close and reopen to ensure new app is loaded???
14. Should just work now....

Note: PBIX needs to be downloaded from service as desktop file no longer most uptodate.
